

Conditions Treated With DIOWAVE Laser Therapy

Additional Conditions Treated

Nerve Pain
Neuropathy (Diabetes & Other Forms)
Non-healing Wounds
Pain & Healing Following Surgery
Trigger Points & Muscle Spasms

Treatment Benefits Include

Drug Free
Surgery Free
Non-Invasive and Painless
No Side Effects
Less Pain
Less Inflammation
Affordable Therapy Option

DIOWAVE Laser Therapy Feel the Difference

In sharp contrast to "Cold Lasers" (LLLT or Low Level Laser Therapy) which provides no feeling or sensation, patients FEEL each DIOWAVE Laser Therapy treatment, as it works to provide laser light energy deep into the body to reach damaged cells and tissues. Results are typically faster than many other therapeutic modalities. Most patients notice a warm, often soothing feeling and often report signs of improvement after the first or second treatment.

See the Results

Both acute and chronic injuries respond well to the DIOWAVE Laser Therapy treatment. Inflammation and swelling are quickly reduced to allow a greater range of motion in the affected area. This helps to regain activity and mobility while reducing scar tissue and adhesions which can slow recovery and healing. Sick and injured tissues are restored to optimal strength and vitality, providing greater functionality and preventing re-injury.

Empowering you to live your best life.

See What Our Patients Are Saying

Merry W: In my effort to hold out as long as possible before having hip replacement surgery, I've tried several types of treatments. The only treatment program that has allowed me to be pain free is DIOWAVE Laser Therapy. After six sessions, I was able to return to Pilates class and resume other activities I had given up. I'm able to sleep on my side again and I have regained the flexibility I had lost in my hip joint. I continue to get periodic laser treatments as needed and I am ecstatic with the results I've achieved.

John T: I am an avid runner, working on becoming an ultra-runner. As I began to increase my miles training for ultras, I began noticing that my hip flexor was constantly tight. I began getting adjusted, which helped, but my hip would still tighten up during a long run. We then combined laser therapy with the adjustment and I noticed my hip feeling loose again. After the second session I have barely felt any pain or tightness whatsoever. Now I have been able to increase my miles without having to worry about how my hip will respond. I can now realize my dream of becoming an ultra-runner.

Chuck S: After years of trauma and abuse to my body my knees have become very painful. My right knee has been diagnosed with a torn meniscus. This was impacting my lifestyle and ability to exercise. After six laser treatments my knee now feels better than the knee that is not injured. I am enjoying my lifestyle again and getting back to activity and exercise. I am so happy with the results that I am planning to get laser treatments on my other knee soon.

Frequently Asked Questions about DIOWAVE Laser Therapy Treatments

How are treatments administered?

Treatments are performed by positioning the laser hand-piece over the skin and surrounding the area of injury and pain with the laser treatment beam.

How many treatments are needed?

The DIOWAVE Laser Therapy produces results quickly. For most ACUTE conditions 5 - 6 treatments is all that is needed. CHRONIC conditions take longer and might require 6 - 12 treatments. While these are the averages, each person is unique and healing time varies by person and condition. For those with lifelong conditions your doctor may recommend 1 or 2 follow-up treatments each month.

Is DIOWAVE Laser Therapy safe without side effects?

Low Level Laser Therapy (LLLT) has been in use for over thirty years around the world. Deep penetrating Class IV DIOWAVE Laser Therapy has been used in the United States since 2003. There have been almost no side effects reported. Occasionally some old injuries or pain syndromes may feel aggravated for a few days, as the healing response becomes more active after a laser treatment.

How long will the treatment take?

Depending on the condition, treatment times for this drug-free, non-invasive procedure will last on average 5 - 10 minutes but is based on the size of area, depth of penetration needed and condition being treated.

Will the treatment hurt?

Most patients notice a warm, often soothing feeling. There is no pain associated with a treatment. Many patients experience pain relief, reduced muscle tension and tightness, reduced inflammation and improved range of motion.

When can normal activity begin again?

The moment a patient leaves the clinic, they may resume normal daily activity. It is important for patients to remember to not over exert themselves for a few days, as the body is still healing.

Will insurance cover treatments?

DIOWAVE Laser Therapy may not be covered by insurance plans. If insurance does not cover the cost of treatments, there are affordable payment plans available.

How does DIOWAVE Laser Therapy work?

When the photons of laser light penetrate the skin and underlying tissue, they are absorbed by the cells, and converted into energy. The cell membrane permeability is altered, which triggers a cascade of cellular events including:

- Stimulation of ATP
- Stimulation of respiratory chain
- Increased DNA and RNA synthesis
- Increased levels of beta endorphins and serotonin
- Enhanced collagen synthesis

What advantage does DIOWAVE Laser Therapy have over other forms of treatment?

DIOWAVE Laser Therapy does not require the use of drugs or surgery, and there are no dangerous side effects or risks. In addition, DIOWAVE Laser Therapy provides enhanced treatment outcomes faster than any other treatment modality.

How is DIOWAVE Laser Therapy better than "Cold Laser Therapy" treatments?

Deep penetrating Class IV DIOWAVE Laser Therapy can penetrate up to two inches. This allows for better, deeper tissue healing. With up to 15.0 watt capability the DIOWAVE laser can treat a much larger volume of tissue.
